Students need a clear next step.

A team-defined problem hypothesis to validate through a student pilot.

Illustrative classroom photograph

Career direction

Connect interests with roles worth exploring.

Skill priorities

Identify areas that need further practice.

Practical action

Turn a chosen direction into weekly activities.

[S2] Pexels photo 7092344. Photo is illustrative; the three needs are not measured research findings.

Connect a career direction to weekly action.

An integrated journey, with direct career browsing available alongside the assessment.

interface languages

[S3] Source: project code and supplied catalogue. Skill targets, group starter profiles and time estimates include illustrative assumptions.

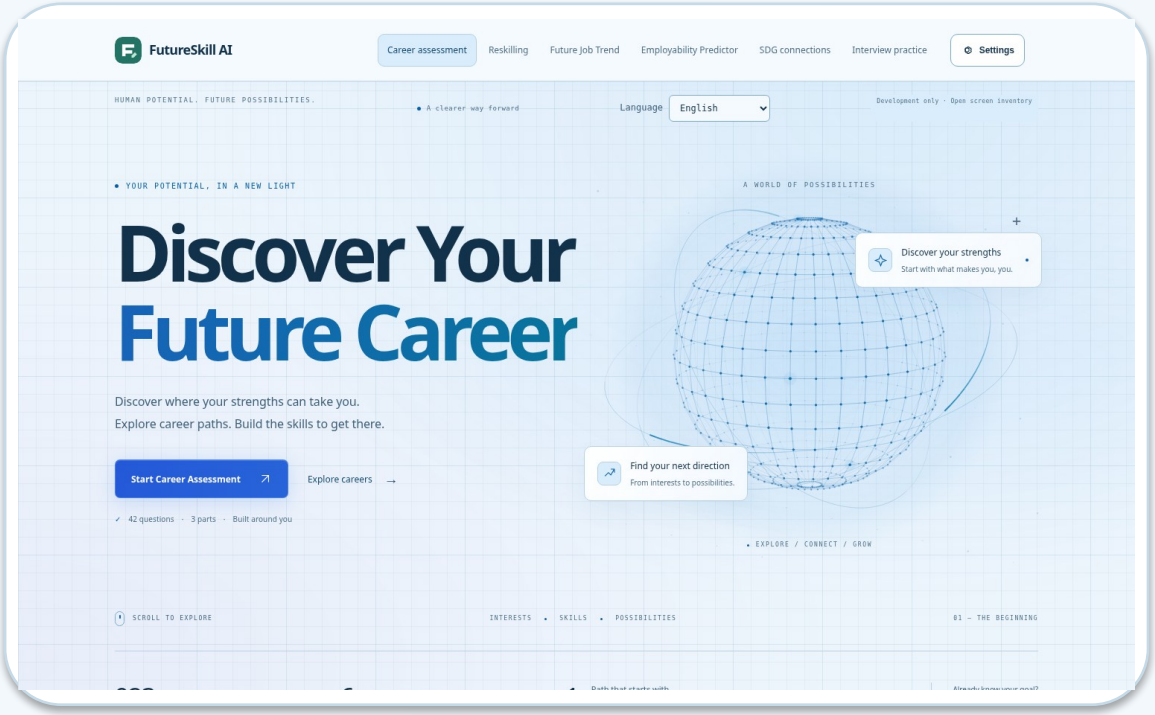

Iteration made the experience more consistent.

Actual interface screenshots: an earlier light theme and the current light theme.

EARLIER LIGHT THEME

REFINED LIGHT THEME

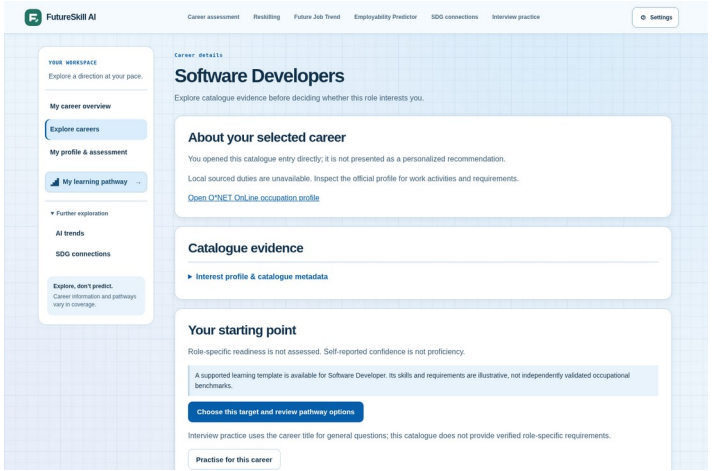

Consistent surfaces / readable colours / preserved navigation

[S4] Project screenshots; before asset from commit 53cfea7, after capture from 48339bc. This is product iteration, not a user-study result.

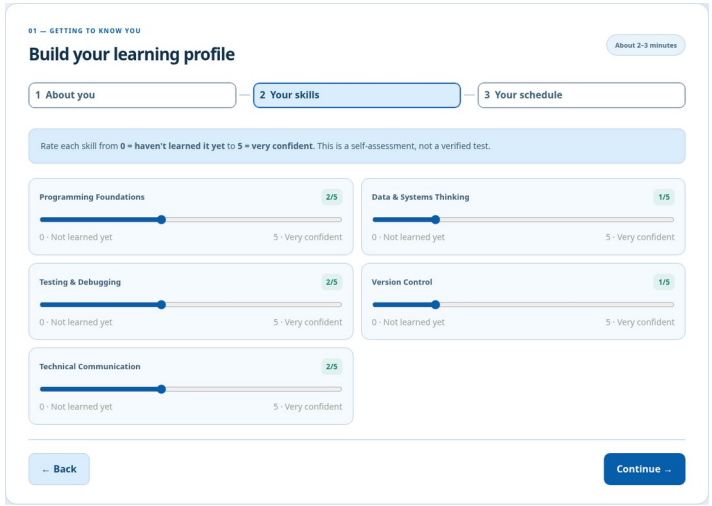

Choose a role. Build a plan. Take action.

Illustrative learner: Software Developers • 6 hours/week • an 8-week planning horizon

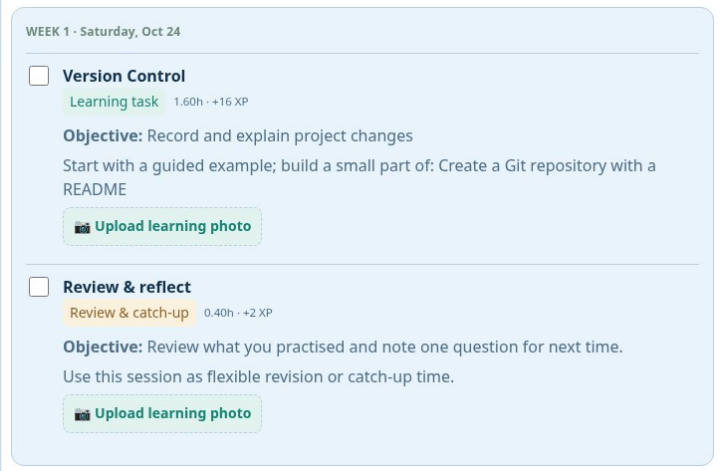

1 CHOOSE A DIRECTION

2 REVIEW YOUR SKILLS

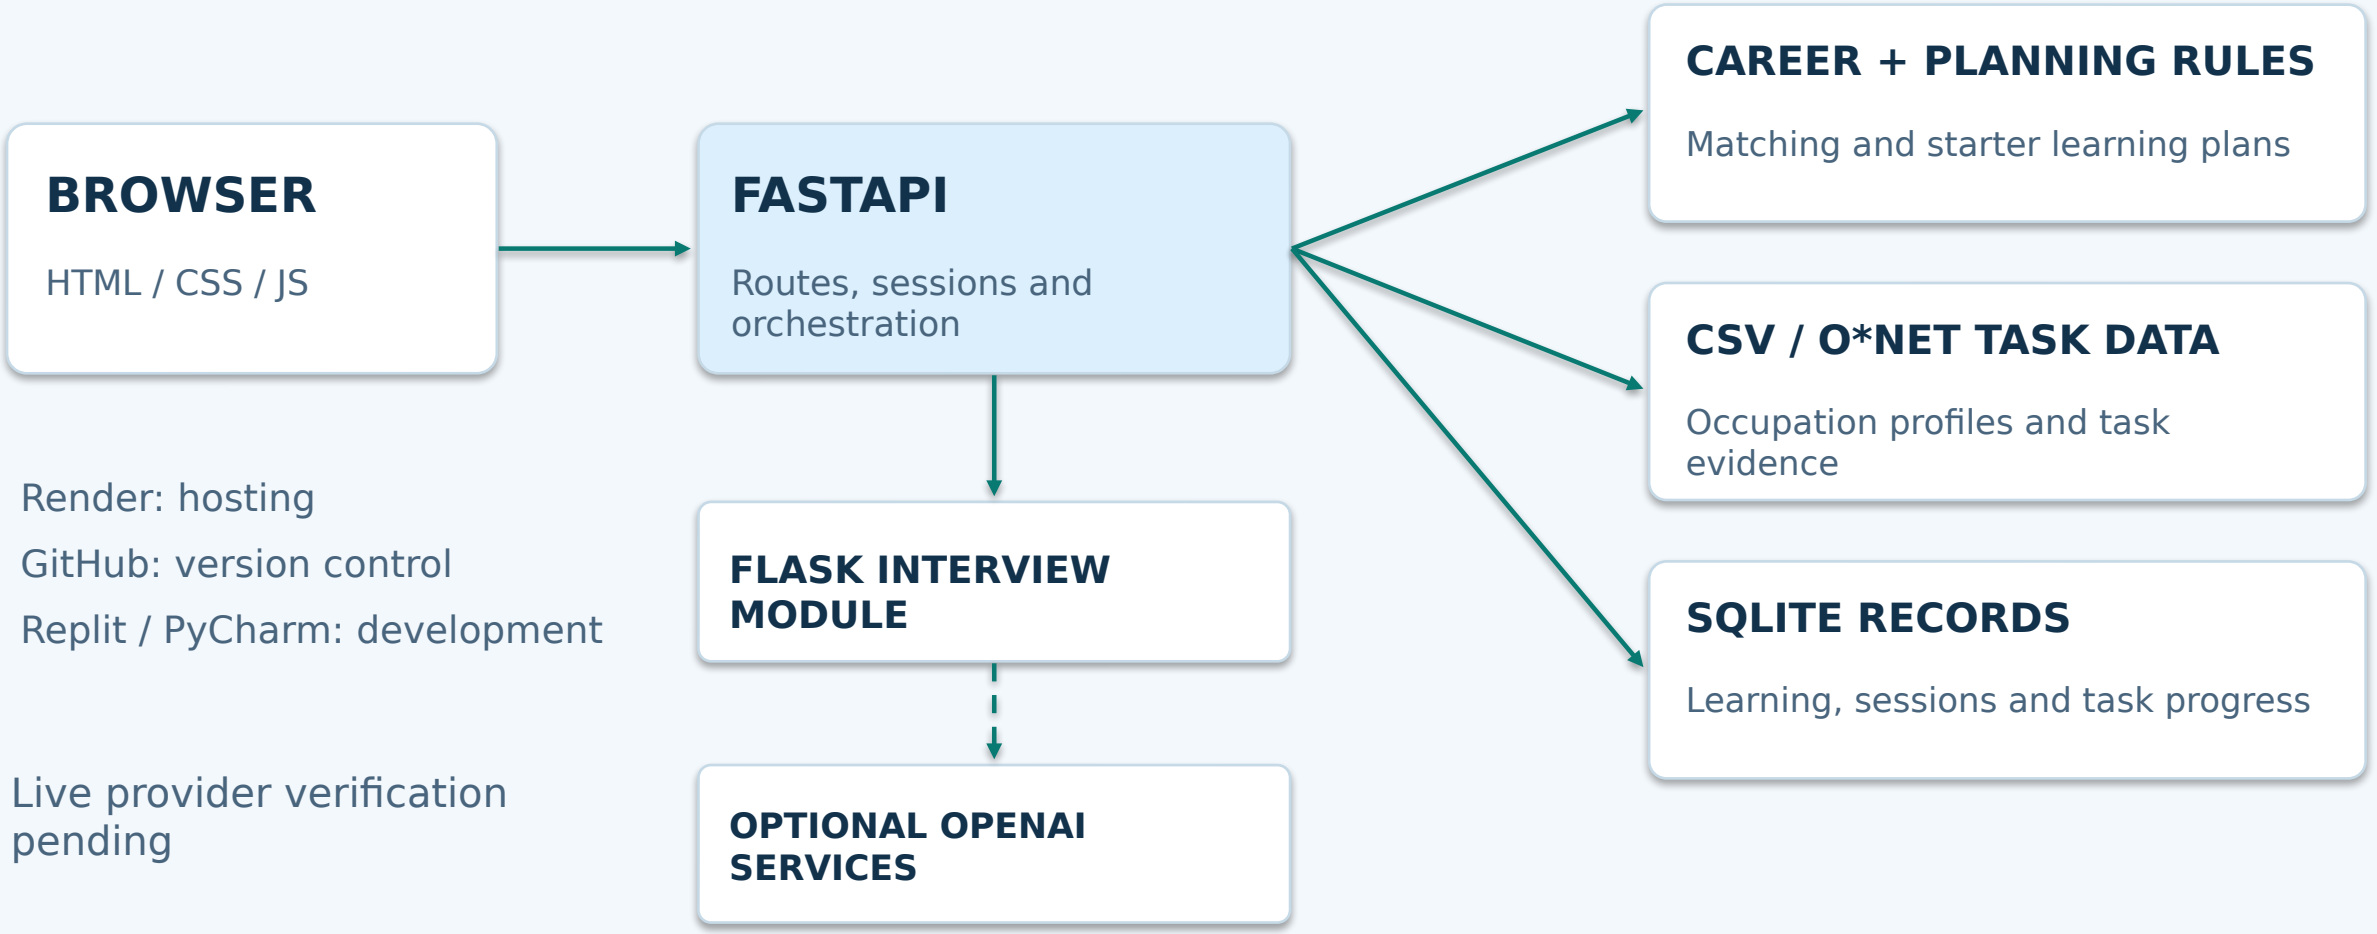

3 FOLLOW WEEKLY TASKS

[S5] Real local browser captures with isolated sample inputs. Full-resolution originals are included. No real learner record or measured outcome is shown.

A connected architecture for the current prototype.

Core career and planning flows use deterministic rules; AI services are a separate integration.

[S6] Source: src/main.py, reskilling/storage.py, explanation_provider.py and hr_interview/. Dashed link: AI service integration pending live verification.

Skills development through SDG 4.4.

Keep the platform contribution distinct from exploratory occupation-to-Goal context.

4 QUALITY EDUCATION

PLATFORM CONTRIBUTION

Identify practice priorities

Follow learning activities

Track completed tasks

Potential support for skills development.

Impact is to be evaluated in the pilot.

TASK IDs + SOURCES

Solar Energy Systems Engineers

O*NET Task ID 16570

Exploratory Target 7.2 hypothesis

[S7] UN Goal 4 / Target 4.4; O*NET 31.0 Task Statements. Source data does not validate the project’s SDG interpretation or imply UN endorsement.

A measurable route to Phase 2.

Separate implemented capabilities, engineering checks and future user outcomes.

CURRENT PROTOTYPE

Career exploration

Starter learning pathways

SQLite task tracking

Three-language interface

PHASE 2 PRIORITIES

Structured student pilot

Validate role requirements

Verify live AI services

Security, durable storage and monitoring

PROPOSED PILOT: 20 STUDENTS / TARGET: AT LEAST 16 SUCCEED (80%)

Success: independently create a plan and explain the priority skill and next activity. Baseline: not yet measured.

[S8] 80% is the team’s Phase 2 target. A 20-person sample and 16 successes are a proposed test design, not observed results.

From “What should I do?”

to “What can I learn next?”

Test a clearer plan.
Find a clearer next step.

Proposed ask: student pilot participants and career-service feedback.
